## How do I choose the screen size?

The right screen size will give the most comfortable viewing. This is calculated based on how far away you are sitting, and remember! Screens are measured in width, so you need to be sitting 1.5 to 2 times the width of the screen away.

Choose your viewing distance to give the recommended screen size.

How far away should my projector be?

All projectors have different throw ratios. This simply determins the minimum \& maximum distance from the projector to the screen.

| $\begin{gathered} \text { Epson EH-TW } \\ 7200,9200,9200 \mathrm{~W} \end{gathered}$ | 160 cm Screen |  | 180 cm Screen |  | 200 cm Screen |  | 220 cm Screen |  | 240 cm Screen |  | 260cm Screen |  | 280 cm Screen |  | 300 cm Screen |  |
